

Issue1: Checkboxes Retain Previous Values When Creating New Rooms

Environment:

- **URL:** <https://automationintesting.online/#/admin>
- **Browser:** Chrome (version 92.0.4515.107), Safari (version 14.1.2), Firefox (version 90.0)
- **Operating System:** macOS

Description: When creating a new room, the checkboxes for room details are not resetting to their default unchecked state. Instead, they retain the checked values from the previously created room. This behavior occurs across multiple browsers and operating systems.

Steps to Reproduce:

1. Navigate to the URL <https://automationintesting.online/#/admin>.
2. In the Login section, enter 'admin' as the Username and 'password' as the Password.
3. Click on the 'Login' button.
4. Navigate to the 'Rooms' tab.
5. Fill in the room details with:
 - Room Number: 101
 - Type: Single
 - Accessible: True
 - Price: 100
 - Room Details: WiFi, TV, Safe
6. Click the 'Create' button to successfully create the room.
7. Observe that the checkboxes for the room details (WiFi, TV, Safe) are checked.
8. Attempt to create another room. Notice that the checkboxes (WiFi, TV, Safe) from the previous room are still checked in the new form.

Note: It is only impacting the UI but not the database because when user starts creating another room then it does not take the already retained value of room details checkboxes (Refer screenshots)

Expected Result: The checkboxes for room details should be reset to unchecked when creating a new room. The values should not persist from the previously created room to ensure that each room creation starts with default settings.

Actual Result: The checkboxes for room details retain the checked values from the previous room creation. This issue indicates that the form is not properly resetting between room creations.

Impact:

This issue can lead to user confusion and potential data entry errors, as the pre-filled checkboxes may inadvertently affect the details of the new room being created. Proper reset of form fields is crucial to ensure accurate and expected data entry for each new room.

Screenshot:

1. When no room is present then all checkboxes are unchecked (in default state)

The screenshot shows the 'B&B Booking Management' form. The header includes 'Rooms Report Branding' and 'B&B Booking Management' with a notification icon and 'Front Page Logout' links. The form fields are: Room # (empty), Type (Single), Accessible (false), Price (empty), and Room details (WiFi, Refreshments, TV, Safe, Radio, Views). All checkboxes are unchecked. A 'Create' button is on the right.

2. User fills details to create room as shown below -

The screenshot shows the 'B&B Booking Management' form with user-filled details. The header includes 'Rooms Report Branding' and 'B&B Booking Management' with a notification icon and 'Front Page Logout' links. The form fields are: Room # (101), Type (Single), Accessible (true), Price (100), and Room details (WiFi, Refreshments, TV, Safe, Radio, Views). The checkboxes for WiFi, TV, and Safe are checked. A 'Create' button is on the right.

3. User clicks on 'Create button'. Room is created successfully but observe second row which shows checkboxes value as retained

The screenshot shows the 'B&B Booking Management' form with the second row highlighted. The header includes 'Rooms Report Branding' and 'B&B Booking Management' with a notification icon and 'Front Page Logout' links. The form fields are: Room # (101), Type (Single), Accessible (true), Price (100), and Room details (WiFi, Refreshments, TV, Safe, Radio, Views). The checkboxes for WiFi, TV, and Safe are checked. A 'Create' button is on the right.

Now try creating a room again with same details (keeping room details as it is and do not modify) and observe no feature are added for second row. It only retains the value in UI not in database

The screenshot shows the 'B&B Booking Management' interface. At the top, there's a navigation bar with 'Rooms', 'Report', and 'Branding' links, and a user profile icon with 'Front Page' and 'Logout' options. Below this is a table with columns: 'Room #', 'Type', 'Accessible', 'Price', and 'Room details'. The table has two rows: Row 1 (Room # 101, Type Single, Accessible true, Price 100, Room details WiFi, TV, Safe) and Row 2 (Room # 102, Type Single, Accessible false, Price 100, Room details No features added to the room). Below the table is a form with input fields for 'Room #', 'Type' (a dropdown menu showing 'Single'), 'Accessible' (a dropdown menu showing 'false'), and 'Price'. To the right of these fields are checkboxes for 'WiFi', 'TV', 'Radio', 'Refreshments', 'Safe', and 'Views'. A 'Create' button is located at the bottom right of the form.

Room #	Type	Accessible	Price	Room details
101	Single	true	100	WiFi, TV, Safe
102	Single	false	100	No features added to the room

Form fields: Room #, Type (Single), Accessible (false), Price, WiFi, TV, Radio, Refreshments, Safe, Views, Create button.

Issue 2: Inconsistent and Misleading Error Messages on Room Creation in B&B Booking Management System

Environment:

- **URL:** <https://automationintesting.online/#!/admin>
- **Browser:** Chrome (version 92.0.4515.107), Safari (version 14.1.2), Firefox (version 90.0)
- **Operating System:** macOS

Description: When attempting to create a new room in the B&B Booking Management system, users encounter inconsistent and misleading error messages if the form fields are not correctly filled. Specifically, two types of issues are observed:

1. The error message "must be greater than or equal to 1" is displayed without specifying which field it refers to, leading to confusion.
2. The message "Room name must be set" appears incorrectly, as there is no field labeled 'Room name'. Additionally, error messages interchange positions upon subsequent submissions, further confusing the user.

Steps to Reproduce:

1. Navigate to the URL <https://automationintesting.online/#!/admin>.
2. Under the Login section, enter 'admin' as the value in the Username field.
3. Enter 'password' as the value in the Password field.
4. Click on the 'Login' button.
5. Navigate to the 'Rooms' tab.
6. Leave the 'Room #' and 'Price' fields empty while filling other fields with default values.
7. Click the "Create" button and observe the error messages.
8. Click the "Create" button again and note if the order of the error messages changes.

Expected Result:

1. Error messages should be clear, specific, and consistently ordered. For example, a more appropriate message for an empty 'Price' field would be "Price must be greater than or equal to 1" and for Room # field a message would be 'Room # must be set'.
2. Additionally, error messages should not interchange positions and should accurately describe the fields they pertain to.

Actual Result:

1. (For Step 7) The error messages "must be greater than or equal to 1" and "Room name must be set" are displayed without clear association with specific fields. For the first message there is no field name specified and for the second message there is no 'Room name' field shown in the room table.
2. (For Step 8) Furthermore, the order of these messages changes with subsequent clicks of the "Create" button, causing further confusion.

Impact: This bug can cause significant user confusion as it makes it difficult for users to identify and correct form errors. Inaccurate and inconsistent error messages hinder the user experience and may lead to incorrect data input or failure to complete room creation.

Screenshots:

- Please find attached screenshots showing the error messages and their changing order.

Screenshot for Step 7:

The screenshot shows the 'B&B Booking Management' interface. At the top, there are navigation links: 'Rooms', 'Report', and 'Branding'. The main header is 'B&B Booking Management' with a notification icon and links for 'Front Page' and 'Logout'. Below the header is a table with columns: 'Room #', 'Type', 'Accessible', 'Price', and 'Room details'. The table contains two rows: Row 1 (Room # 101, Type single, Accessible true, Price 100, Room details TV, WiFi, Safe) and Row 2 (Room # 102, Type Single, Accessible false, Price 150, Room details No features added to the room). Below the table is a form with input fields for 'Room #', 'Type' (a dropdown menu showing 'Single'), 'Accessible' (a dropdown menu showing 'false'), and 'Price'. There are also checkboxes for 'WiFi', 'TV', 'Radio', 'Refreshments', 'Safe', and 'Views'. A 'Create' button is located to the right of the form. At the bottom of the form, there are two error messages displayed in a pink box: 'must be greater than or equal to 1' and 'Room name must be set'.

Screenshot for Step 8:

1st click of Create button -

Rooms Report Branding B&B Booking Management Front Page Logout

Room #	Type	Accessible	Price	Room details	
101	single	true	100	TV, WiFi, Safe	x
102	Single	false	150	No features added to the room	x

☐ WiFi ☐ TV ☐ Radio
☐ Refreshments ☐ Safe ☐ Views

must be greater than or equal to 1
Room name must be set

2nd Click of Create button -

Rooms Report Branding B&B Booking Management Front Page Logout

Room #	Type	Accessible	Price	Room details	
101	single	true	100	TV, WiFi, Safe	x
102	Single	false	150	No features added to the room	x

☐ WiFi ☐ TV ☐ Radio
☐ Refreshments ☐ Safe ☐ Views

Room name must be set
must be greater than or equal to 1

Issue 3: Unintended Room Deletion Without Confirmation Prompt in B&B Booking Management System

Environment:

- **URL:** <https://automationintesting.online/#/admin>
- **Browser:** Chrome (version 92.0.4515.107), Safari (version 14.1.2), Firefox (version 90.0)
- **Operating System:** macOS

Description: In the B&B Booking Management system, clicking the "X" (cross) button next to a room entry immediately deletes the room without displaying a confirmation dialog. This behavior can lead to accidental deletion of room data, potentially resulting in data loss and impacting booking management.

Steps to Reproduce:

1. Navigate to the URL <https://automationintesting.online/#/admin>.
2. Under the Login section, enter 'admin' as the value in the Username field.
3. Enter 'password' as the value in the Password field.

Steps to Reproduce:

1. Navigate to the URL <https://automationintesting.online/#/admin>.
2. Under the Login section, enter 'admin' as the value in the Username field.
3. Enter 'password' as the value in the Password field.
4. Click on the 'Login' button.
5. Navigate to the 'Rooms' tab.
6. Enter the details for a room with a specific room number (e.g., Room # 101).
7. Click the "Create" button.
8. Without changing the room number, enter the same room details again.
9. Click the "Create" button once more.

Expected Result: The system should prevent the creation of duplicate rooms with the same room number. A warning or error message should be displayed if an attempt is made to add a room with a number that already exists in the system.

Actual Result: The system allows the creation of multiple entries with the same room number (e.g., Room # 101), as shown in the attached screenshot. This leads to duplicate room records being added to the system.

Impact: This bug could cause confusion in room management and lead to potential overbooking or discrepancies in the availability of rooms.

Severity: Medium

Attachment: Screenshot showing the duplicate room entries (Room # 101) in the system.

The screenshot displays the 'B&B Booking Management' interface. At the top, there is a navigation bar with 'Rooms', 'Report', and 'Branding' on the left, and 'Front Page' and 'Logout' on the right. Below the navigation bar is a table with the following columns: 'Room #', 'Type', 'Accessible', 'Price', and 'Room details'. The table contains two identical entries for Room # 101, both of which are highlighted with a green circle. The first entry shows 'Room # 101', 'Type: Single', 'Accessible: true', 'Price: 100', and 'Room details: WiFi, TV, Safe'. The second entry is identical. Below the table, there is a form for creating a new room. The form includes a 'Room #' field (empty), a 'Type' dropdown menu (set to 'Single'), an 'Accessible' dropdown menu (set to 'false'), a 'Price' field (empty), and several checkboxes for amenities: 'WiFi' (checked), 'TV' (checked), 'Radio' (unchecked), 'Refreshments' (unchecked), 'Safe' (checked), and 'Views' (unchecked). A 'Create' button is located at the bottom right of the form.

Room #	Type	Accessible	Price	Room details
101	Single	true	100	WiFi, TV, Safe
101	Single	true	100	WiFi, TV, Safe

Form fields:

- Room #:
- Type:
- Accessible:
- Price:
- WiFi: ☒
- TV: ☒
- Radio: ☐
- Refreshments: ☐
- Safe: ☒
- Views: ☐

Create button:
